

Broadband USA Applications Database

Applicant Name: IT&E

_____ **Public Notice Submissions** _____

-----**Service Area:** Guam

Submitter: Docomo Pacific, Inc.

Comment: Docomo Pacific currently provides broadband service at speeds of higher than 768 kbps (but only advertised less than 3 Mbps) that is capable of reaching more than 90% of households in Guam. Docomo Pacific disagrees with IT&E's assertion that Guam is "underserved" with respect to broadband service, because existing LEC and cable company broadband service providers in Guam are providing broadband service in areas overlapping with IT&E's proposed service area at download speeds of at least 7 Mbps.
