

Broadband USA Applications Database

Applicant Name: Northeast Michigan Council of Governments/Northern Michigan Broadband Cooperative

Public Notice Submissions

-----**Service Area:** Route 27

Submitter: Custom Software Inc. dba/M-33 Access

Comment: Custom Software Inc. dba/M-33 Access is an ISP and CLEC (and ILEC pending FCC approval) based in Rose City Michigan currently providing telecommunications service (voice and data) to customers in seven contiguous counties in northeastern Michigan. The counties in the service area are Alcona, Arenac, Crawford, Iosco, Ogemaw, Oscoda, and Roscommon. There are a number of customers throughout the service area that are receiving high-speed broadband service. This application proposes to serve an area where we already provide DSL services and wireless high speed services that exceed NOFA requirements. To claim this area is un-served or even under-served is an error on their part. The information submitted to RUS in our BIP application did not propose to extend the current service area beyond the present footprint as did most other applicants. This applicant also wants to expand their territories at the expense of current providers effectively putting them out of business.
