

Broadband USA Applications Database

Applicant Name: Communications Infrastructure Group, LLC

Public Notice Submissions

-----**Service Area:** Georgia

Submitter: TDS Telecom

Comment: TDS Telecom offers 3Mbps broadband service within the applicants proposed service area and provides broadband service to customers pursuant to the NOFA definitions.

Submitter: James Cable LLC

Comment: James Cable provides 8Mb broadband service to the communities of Eatonton, Putnam and Baldwin Counties, Georgia.

Submitter: Plant Communications

Comment: Plant Telecommunications (“Plant”) is responding to this Public Notice Filing regarding Communications Infrastructure, LLC’s application for broadband funding under the ARRA. The applicant’s proposed funded service area is located in middle Georgia and covers parts of Montgomery and Treutlen Counties. Plant is an incumbent broadband provider that currently offers broadband service (as defined in the NOFA) to 95% of its service area as outlined in response area map in Montgomery, Johnson, Emanuel and Treutlen Counties. For the proposed funded service area which overlaps with Plant’s incumbent service area, the applicant claims that it is “underserved”. The data provided in this response demonstrates that the applicant’s claim that the overlap with the proposed funded service area is “underserved” is not true.

Submitter: Windstream

Comment: Windstream’s data strongly suggest that the proposed funded service area likely does not qualify as an underserved area. Windstream offers facilities-based, terrestrial broadband service (meeting the definition set forth in the Notice of Funds Availability) to some of the households in the proposed funded service area, and such households can readily subscribe to Windstream’s broadband service upon request. Windstream also has reason to believe that competitive broadband offerings are

available in exchanges overlapping the proposed funded service area. Given this information, agency officials should further investigate existing broadband offerings within the proposed funded service area, so that officials can be sure that the area, in fact, qualifies as underserved.

Windstream is a communications and entertainment company with more than 1 million broadband customers in 16 states. Investing more than \$200 million in broadband deployment over the last several years, Windstream now offers approximately 89% of its 3 million voice customers access to quality and affordable broadband service.

The agencies define an “underserved area” as follows: “Underserved area means a proposed funded service area, composed of one or more contiguous census blocks meeting certain criteria that measure the availability of broadband service and the level of advertised broadband speeds. These criteria conform to the two distinct components of the Broadband Infrastructure category of eligible projects- Last Mile and Middle Mile. Specifically, a proposed funded service area may qualify as underserved for last mile projects if at least one of the following factors is met, though the presumption will be that more than one factor is present: 1. No more than 50 percent of the households in the proposed funded service area have access to facilities-based, terrestrial broadband service at greater than the minimum broadband transmission speed (set forth in the definition of broadband above); 2. No fixed or mobile broadband service provider advertises broadband transmission speeds of at least three megabits per second (“mbps”) downstream in the proposed funded service area; or 3. The rate of broadband subscribership for the proposed funded service area is 40 percent of households or less. A proposed funded service area may qualify as underserved for Middle Mile projects if one interconnection point terminates in a proposed funded service area that qualifies as unserved or underserved for Last Mile projects.
