Priority should not be given on a first come first serve basis. we should formulate a point system that can be applied to each applicant giving one point for each condition met. stations should be awarded grants with the most points getting the highest priority.

the start date should be all lptv stations on air by October 1 2008.

will the poverty level of the rural area be included in the award program?

KNXT LP is licensed in Bakersfield California and we service many communities that are less than 20,000. do we qualify for the grant

In your estimates of the number of eligible facilities, what authorizations are you including-CP, licensed only, etc??

Are the re-imbursements funded at 100% or at some other given percentage such as 50%--similar to PTFP.

Many of the translators that provide non-commercial service are part of the public broadcast systems. Are these interpreted to be governmental bodies??
