

It is extremely important for us to assure our nursing home residents access to television service after February of 2009. This population relies on air waves to operate their televisions and they are representatives of a generation who do not have interest in an expanded cable service.

The proposed process of having an administrator submit their SS# and the facility license with each application is excessive and it presents a barrier for residents to access the coupon. Nursing home providers are already consumed with excessive documentation that competes with the available time for providing hands-on care.

Please help us find a practical way to meet out residents needs for television service allowing them access to a very important part of their lifestyle.
