

# 932-935 MHz

## 1. Band Introduction

The 932-935 MHz band is allocated to the fixed service on a shared, co-equal basis between Federal and non-Federal users. The Federal agencies operate low-capacity voice and/or data point-to-point, point-to-multipoint microwave communication systems in this band. In addition, Federal Government off-shore radiolocation operation is permitted on a non-interference basis limited to the military agencies.

## 2. Allocations

### 2a. Allocation Table

The frequency allocation table shown below is extracted from the Manual of Regulations and Procedures for Federal Radio Frequency Management, Chapter 4 – Allocations, Allotments and Plans.

#### *Table of Frequency Allocations*

#### *United States Table*

<b>Federal Table</b>	<b>Non-Federal Table</b>	<b>FCC Rule Part(s)</b>
932-935 FIXED US268 G2	932-935 FIXED US268 NG120	Public Mobile (22) Fixed Microwave (101)

### 2b. Additional Allocation Table Information

**G2** In the bands 216-217 MHz, 220-225 MHz, 420-450 MHz (except as provided by US217 and G129), 890-902 MHz, 928-942 MHz, 1300-1390 MHz, 2310-2390 MHz, 2417-2450 MHz, 2700-2900 MHz, 3300-3500 MHz (except as provided by footnote US108), 5650-5925 MHz, and 9000-9200 MHz, the Federal radiolocation service is limited to the military services.

**NG120** Frequencies in the band 928-960 MHz may be assigned for multiple address systems and mobile operations on a primary basis as specified in 47 CFR part 101.

**US268** The bands 890-902 MHz and 928-942 MHz are also allocated to the radiolocation service for Federal ship stations (off-shore ocean areas) on the condition that harmful interference is not caused to non-Federal land mobile stations. The provisions of footnote US116 apply.

**March 1, 2014**

### 3. Federal Agency Use

#### 3a. Federal Agency Frequency Assignments Table

The following table identifies the frequency band, type(s) of allocation(s), types of application, and the number of frequency assignments by agency.

*Federal Frequency Assignment Table*

932-935 MHz Band			
SHARED BAND			
AGENCY	FIXED		
	TYPE OF APPLICATION		
	POINT TO POINT DATA LINK		TOTAL
A	28		28
AF	12		12
CG	14		14
DHS	47		47
DOE	120		120
DOI	30		30
FAA	107		107
N	1		1
TVA	13		13
<b>TOTAL</b>	<b>372</b>		<b>372</b>

The number of actual systems, or number of equipments, may exceed and sometimes far exceed, the number of frequency assignments in a band. Also, a frequency assignment may represent, a local, state, regional or nationwide authorization. Therefore, care must be taken in evaluating bands strictly on the basis of assignment counts or percentages of assignments.

### 3b. Percentage of Frequency Assignments Chart

The following chart displays the percentage of frequency assignments in the Government Master File for the applications operating in the frequency band 932-935 MHz.

#### 4. Frequency Band Analysis By Application

The 932-935 MHz band is paired with the 941-944 MHz band and is used by the Federal agencies for fixed point-to-point/multipoint, low-capacity microwave communication systems. The Federal agencies that use these bands include, but are not limited to, the: Federal Aviation Administration (FAA), United States Department of Agriculture (USDA), Department of Energy (DOE), Department of Interior (DOI), and Department of Homeland Security (DHS). Spectrum use for each agency is similar in both the 932-935 and 941-944 MHz bands. Usually, a transmit frequency in one band has a corresponding receive frequency in the other band. Section 4.3.14 of the NTIA Manual contains a channel plan for Federal assignments in these bands using pairs of channels with bandwidths of 25 kHz, 50 kHz, 100 kHz and 200 kHz.

The FAA uses the 932-935 MHz and 941-944 MHz bands for low-density communications (voice and/or data) systems. The majority of the FAA frequency assignments are for the Low-Density Radio Communication Link systems that are deployed across the United States and used to transfer data between air traffic control ground installations in support of the National Airspace System. The frequency assignments for the USDA are concentrated on the West Coast and in the North-central States and are used for point-to-point, microwave backbone communication systems. The DOE operates fixed point-to-point microwave systems primarily located in remote areas of the United States, that are not accessible by commercial services (e.g., telephone), for such things as the transmission of telemetry data and supervisory control and data acquisition (SCADA).<sup>1</sup> The DOI operates fixed point-to-point microwave communication systems that directly support law enforcement and fire suppression activities; and resource management applications (for example, water meter interrogation). DHS operates fixed point-to-point microwave systems in this band in direct support of law enforcement activities.

#### 5. Planned Use

The Federal Government use of the 932-935 MHz band for fixed point-to-point/multipoint microwave systems is expected to continue indefinitely.

---

<sup>1</sup> SCADA refers to a system that collects data from various sensors at a factory, plant or in other remote locations and then sends this data to a central computer which then manages and controls the data.
