**Subject:** broadband internet

Hello

I have just read an article in my electric co-op paper which I found irritating about the access to internet..It seems all of the media think every one has a computer--wrong

Then they think every one has high speed internet--wrong again.

They will put a news article on like the airbag recall and then they say go to their website to get the names being recalled.Well I am one of those people that can;t.I get only dialup.

Then I am told go get excede from the satellite..That is a total ripoff from what you get to what you pay..5 miles down the road people get broadband and pay 14.95 month..People in next town get it for no more than \$20 a month..Exede and hughes and others after adding up all their fees want over \$80 a month..Older people like us can not afford to throw money away just because we live put of town.Something needs to be done about keeping the price some what even for every body.I was at a friends house and read on the computer that the USA is way down on the list for price and highspeed and most 3rd world countries have better internet than us..Thats pitiful..
