Subject: Last mile services

Hi,

My name is Jamie whittle with whittle electronics in Aiken sc, 29801. I have been in communications when pagers were the way to go. My company is located just at the last mile of high speed. I started the project about 1.5 years ago because of my current customer base was so unhappy with the verizion service that I had no options but to install. In oct 2014 we had a very bad fire [REDACTED] in fact we a still pulling out of the rut. My question is there are cell company's with the coverage now. Now I have secured several tower locations as well as a 99 Mbps open fiber to my backhaul with room for expansion. I am confused with all the legal paperwork. I don't won't to do anything I should not do. I aim to provide an area that has the wild life Turkey fed coming

. Just need to know what I am able to do. Thanks so much Jamie
