Applicant Name:  ART Leasing, Inc. dba FiberTower Broadband Corp.

Service Area:  FTWR-AL-102

Submitter:  AT&T

Comment:  AT&T is providing data about its wireline and mobile broadband footprint to assist in determining whether the applicant's proposed service area, which may be part of a larger application and project, satisfies the unserved and underserved eligibility requirements. Additional information regarding other broadband service providers' currently operating in the service area may be needed in order to make a reasonable analysis or a conclusive determination.

Submitter:  Windstream

Comment:  Windstream’s data strongly suggest that the proposed funded service area likely does not qualify as an underserved area. Windstream offers facilities-based, terrestrial broadband service (meeting the definition set forth in the Notice of Funds Availability) to some of the households in the proposed funded service area, and such households can readily subscribe to Windstream’s broadband service upon request. Windstream also has reason to believe that competitive broadband offerings are available in exchanges overlapping the proposed funded service area. Given this information, agency officials should further investigate existing broadband offerings within the proposed funded service area, so that officials can be sure that the area, in fact, qualifies as underserved.

Windstream is a communications and entertainment company with more than 1 million broadband customers in 16 states. Investing more than $200 million in broadband deployment over the last several years, Windstream now offers approximately 89% of its 3 million voice customers access to quality and affordable broadband service.
The agencies define an “underserved area” as follows: “Underserved area means a proposed funded service area, composed of one or more contiguous census blocks meeting certain criteria that measure the availability of broadband service and the level of advertised broadband speeds. These criteria conform to the two distinct components of the Broadband Infrastructure category of eligible projects—Last Mile and Middle Mile. Specifically, a proposed funded service area may qualify as underserved for last mile projects if at least one of the following factors is met, though the presumption will be that more than one factor is present: 1. No more than 50 percent of the households in the proposed funded service area have access to facilities-based, terrestrial broadband service at greater than the minimum broadband transmission speed (set forth in the definition of broadband above); 2. No fixed or mobile broadband service provider advertises broadband transmission speeds of at least three megabits per second (“mbps”) downstream in the proposed funded service area; or 3. The rate of broadband subscribership for the proposed funded service area is 40 percent of households or less. A proposed funded service area may qualify as underserved for Middle Mile projects if one interconnection point terminates in a proposed funded service area that qualifies as unserved or underserved for Last Mile projects.”

Submitter: Comcast Cable

Comment: Attached is a summary of the Comcast Cable homes passed, subscriber and advertising information related to the service areas encompassed by this application.

Submitter: Cyber Broadband Inc

Comment: Cyber Broadband is providing speeds of 3 meg using Motorola Canopy equipment available to 90% of residents within Cullman County. It currently serves 143 customers.

------Service Area: FTWR-AL-28

Submitter: Cellular South
**Comment:** Respondent, Cellular South, Inc., is a privately held Mississippi corporation and commercial mobile radio service provider which provides wireless telecommunications and broadband data services to its customers throughout the State of Mississippi, in western Tennessee, in southern Alabama, and northwest Florida. Respondent operates a broadband data transmission network in the State of Mississippi which utilizes Evolution Data Optimized (“EvDO”) technology which provides data transmission speeds up to a maximum of 3.0 mbps downstream and 1.0 mbps upstream. Respondent’s EvDO network is deployed in all or part of Applicant’s proposed service area and, therefore, no portion of Applicant’s proposed service area where Respondent’s EvDO service is deployed is unserved because Respondent’s EvDO service is accessible by 100% of the households in Respondent’s service area. Respondent notes that actual wireless coverage and broadband data transmissions may vary due to atmospheric conditions, customer equipment, and/or system limitation.

**Submitter:** Telepak Networks, Inc.

**Comment:** Respondent, Telepak Networks, Inc., is a privately held Mississippi corporation and competitive local exchange carrier which provides telecommunications, video and broadband data services to residents in its licensed service areas. Respondent operates a broadband transmission network which runs from Jackson, Mississippi, to Memphis, Tennessee, to New Orleans, and throughout the State of Mississippi. Respondent also operates fiber-to-the-home networks in Crystal Springs, Inverness, and Roxie Mississippi as well as certain residential developments in the State of Mississippi.

**Submitter:** CenturyLink

**Comment:** CenturyLink has an extensive broadband footprint today, and has committed to extend that service even further. As part of its merger commitments to the Federal Communications Commission, CenturyLink committed to offer retail broadband Internet access service to 100% of its broadband eligible access lines by July 1, 2012. Consequently, virtually no areas served by CenturyTel or Embarq local operating companies, in any state, will be underserved or unserved at the end of three years.

CenturyLink also agreed to meet targets for minimum download speeds. CenturyLink will ensure availability of retail broadband Internet access service with a download speed of 1.5 Mbps to 87% of the broadband eligible access lines by July 1, 2011. It will ensure availability with a download speed of 3 Mbps to 75% of broadband eligible access lines by July 1, 2010, to 78% of broadband eligible lines by July 1, 2011, and to 80% of broadband eligible lines within 3 years of the close date. Nationwide, our average tele-density is 23 customers per square mile. This commitment ensures availability of broadband even to very rural consumers.
The agency should consider the importance of this commitment, as CenturyLink’s continuing investment inevitably will make applications that overlap CenturyLink service areas less viable. CenturyLink has proven, industry-leading experience in deploying broadband networks and services using both wireline and wireless technology, and a strong commitment and focus on rural areas. Today, it serves 7 million access lines and 2.1 million broadband customers in 33 states.

Submitter: Mediacom

Comment: The vast majority of households within applicant’s proposed service area are currently served by at least two wireline broadband service providers and a variety of wireless providers. Broadband speeds well in excess of the minimum broadband speeds set forth in the NOFA are currently available within the applicant’s proposed service area. For its part, Mediacom advertises and provides broadband services within the proposed service area at speeds up to 20 Mbps. Approval of this application would result in duplicative broadband services and a waste of taxpayer dollars.

Submitter: AT&T

Comment: AT&T is providing data about its wireline and mobile broadband footprint to assist in determining whether the applicant’s proposed service area, which may be part of a larger application and project, satisfies the unserved and underserved eligibility requirements. Additional information regarding other broadband service providers' currently operating in the service area may be needed in order to make a reasonable analysis or a conclusive determination.

Submitter: Comcast Cable

Comment: Attached is a summary of the Comcast Cable homes passed, subscriber and advertising information related to the service areas encompassed by this application.
Service Area: FTWR-AL-449

Submitter: AT&T

Comment: AT&T is providing data about its wireline and mobile broadband footprint to assist in determining whether the applicant's proposed service area, which may be part of a larger application and project, satisfies the unserved and underserved eligibility requirements. Additional information regarding other broadband service providers' currently operating in the service area may be needed in order to make a reasonable analysis or a conclusive determination.

Submitter: Bright House Networks, LLC

Comment: In support of NTIA and RUS' efforts to optimize the distribution of the scarce resources available under the ARRA Broadband NOFA, Bright House Networks is providing additional data related to this Applicant’s planned service areas. This application includes service areas which are not unserved nor underserved.

Submitter: Windstream

Comment: Windstream’s data strongly suggest that the proposed funded service area likely does not qualify as an underserved area. Windstream offers facilities-based, terrestrial broadband service (meeting the definition set forth in the Notice of Funds Availability) to some of the households in the proposed funded service area, and such households can readily subscribe to Windstream's broadband service upon request. Windstream also has reason to believe that competitive broadband offerings are available in exchanges overlapping the proposed funded service area. Given this information, agency officials should further investigate existing broadband offerings within the proposed funded service area, so that officials can be sure that the area, in fact, qualifies as underserved.
