Wave Internet Technologies LLC (hereafter Wave) is a wireless broadband internet service provider in Rolla, MO. Wave currently owns/maintains and operates ten tower locations to provide broadband internet services to residents throughout Mid-Missouri. The purpose of the project presented by Wave is to deliver broadband internet service to residents in Dent and Phelps Counties who have little or no access to existing broadband service. Moreover, these areas are highly unlikely to be served by cable, DSL, or other providers due to cost and lack of potential customer base. Wave's project seeks to cover parts of Rolla and Salem, MO and smaller towns in between including Lenox, Yancy Mills, Vida, and many more. Wave suspects there are over 1400 unserved or underserved households in this area, over 100 business, and over 10 strategic institutions. Wave proposes to serve these customers with broadband wireless internet service utilizing 900MHz, 2.4GHz, 3.65GHz, and 5.8GHz in speeds ranging from 0.5Mbps to 6Mbps. The proposed cost of these services begin at $32.94 per month. Wave has always complied with and will continue to comply with non-discrimination and interconnection obligations. These obligations allow for the best end user experience and reduce the number of potential headaches for Wave. Wave is a family-owned and operated business currently pursuing outside help from employees and contractors. Wave has been successfully operated and managed since its existence began in 2005. Wave's team includes those knowledgeable in all fields including networking, computing, routing, financial analysis, accounting and customer service. Wave expects the ability to serve over 1400 potential customers, but reasonably expects a minimum of 370 household customers, 36 business customers, and 10 strategic institutions. The expected project cost is $300,000, 20% of which will be funded by non-government sources. This project will create more than ten jobs internally for Wave while creating an expected one hundred jobs elsewhere. This project will help aid other federal government programs as well. Wave Internet Technologies LLC is excited about the potential opportunity to serve customers in unserved and underserved areas of Mid-Missouri with broadband internet service. Our project is well-detailed and planned and should have a tremendous effect on the economy in this area.
