The proposed Fiber to the Home system will provide Broadband Access to 4 rural Towns innorthern New Hampshire that are unserved at this time. There are 1800 homes passed in the service area along with 174 businesses. The Towns are Milan, Stratford, Stark and Drummer New Hampshire. Argent Communications currently is the Cable Television Provider in Stratford and Milan. The area's Household income varies from $40,966.00 for Milan to $28,594.00 for Stratford. Argent Communications currently provides service to the Town facilities at no cost and will provide broadband servive at a reduced cost to these facilities. Also we will provide equipment and service for free public access to residents at the libraries in each Town. The proposed service will have 3 tiers for residential subscribers and 2 tiers for businesses to allow for flexibility in meeting the needs of the communities. The speeds will vary from 1.0mbps/.512mbps up to 10.0mbps/2.5mbps which meet the requirements of the BTOP. We will comply with all current and future FCC regulations and policies applying to non-discrimination and interconnection. the policies will be provided to the subscribers at the time of installation and posted on the argent communication website. The system is a single fiber wavelength division multiplexing design using RFrog(RF over Glass) technology. the system has 6 cabinets located to service 256 subscribers per cabinet. All fibers are brought back to the cabinet where the electronics are located. Fiber runs from the cabinets back to the head end for hand off to our service provider. Total cost of infrastructure is $986,473 for the system. We expect that a total of 875 residential and 110 business subscribers will sign-up for service. Job projection for the area is hard to determine but we will be hiring 1-2 techs for the system and use local people in the construction of the system. Having broadband access should make the area more attractive to businesses moving into or expanding in the area. Argent Communicationsis also looking at serving more communities in the area.
