KMAC Industries, Inc. has a mission to develop and implement a plan to bring Broadband service to some of the underserved counties in South-Eastern Mississippi. These include Pearl River, Marion, Forrest, Lamar, Hancock and Jefferson Davis counties. This project is divided into two Phases. Phase 1 involves creating a detailed proposal so that government officials and independent investors could evaluate the technical aspects of the design. Phase 1 would include a complete detailed plan including all surveys, details assessments, wetlands issues, network diagrams, all project timelines, organizational charts, financial estimates, and all other documents required by the Federal Stimulus Grant or Loan Application Program. The cost of this first phase would be approximately $50,000. Phase 2 is the implementation phase of the proposal developed in Phase 1. It includes the purchase of the equipment, installation of said equipment, systematic build-out of system, check-out of system, and all infrastructure components associated with this project. Phase 2 would begin after the award of the Stimulus Grant or Loan and acceptance of all terms associated with those funds. This project will have the potential to serve all 91,067 households living in the PRCC six-county district. A total of 108 direct, indirect and induced job years will be created by this project. Phase 2 will establish a county wide WiMAX / Wi-Fi network (System) that will offer broadband wireless Internet access to residential customers, schools, government agencies, outdoor venues, businesses, and visitors to the area. The estimated cost of the second phase would be approximately $10,000,000.
