Public Computer Centers are of critical importance to Indian Reservations such as the Shivwits Band. High unemployment, low earning power of those working in Indian Reservations, and the lack or affordability of Internet services inherent to rural communities, makes it difficult for Tribal members to benefit from the use of the Internet for all aspects of their daily lives. Our youth, working adults, and critical facilities need access to information related to health services, social services, business development, safety, employment opportunities and educational development that can empower them to further enhance their skill levels and competence to better compete in today’s competitive economy and improve their way of life. PCCs are also important to provide our youths with a safe and educationally enhancing place to spend time after school and weekends learning and having fun in a structured and supervised location. With limited recreational options inside the reservation, a PCC is an ideal location for our children to socialize while enhancing their education and technical skills. Our intent is to develop a PCC with the required technology enhance and extend educational activities youths and on-line learning opportunities for our adults, better manage health services, support our social programs such as Domestic Violence by accessing educational programs that teach prevention and mitigation, facilitate Telehealth activities, and support the potential of engaging in economic development activities. The proposed PCC will serve 270 members of the Shivwits Band.
