Coral Gables Outreach is a plan to expand and enhance the current institutional network (I-net) serving public and private educational, cultural and research organizations. The I-net as originally planned would have connected up to forty (40) public and private locations within the City of Coral Gables. Local government has limited ability to provide citizens with access to broadband when not served by private interests. Public safety, research, health, education and other service organizations are greatly impacted by the cost of technology in providing and delivering on their core missions. Institutional networks provide a boon to the commonwealth by addressing issues of middle and last mile while enabling local government to play a roll in improving public safety, health and education services. Sustainability models further lessen the burden on government by addressing long term economic concerns; where funding under this proposal allows for overcoming the immediate economic deterrence at start up. Extending the City’s institutional network would not be possible at this time without BTOP funding. The program intends to offer fee-based and free training to groups and individuals to improve workforce skills, enhance education opportunity, and improve quality of life for elderly, youth and disadvantaged citizens. The program will expand trainings at the Parks and Recreation Center for seniors to include classes aimed at workforce improvement, business efficiencies, and arts and science awareness. The program improves quality of life of Seniors; provides access to telemedicine programs from hospitals and clinics, provides access to online resources for Seniors (Social Security, Medicaid, Medicare, government forms, AARP, etc.). It improves computer/digital literacy and skills for job training and career advancement; it provides online access to jobs and career resources and applications, and it enables economic development through reducing unemployment rates, stimulating the economy. It also improves quality of life for children and young adults through education; provides access to online resources for recreation, education, arts, culture and science. With this model and additional resources business consulting and training for success, efficiency, and sustainability (Six-Sigma, Lien Agile, Business Administration/management) can also be included in the program. The program sustains itself by charging low fees, as it does already in the Senior program, to cover staffing and maintenance costs. The program as designed provides for hiring two (2) trainers to conduct the classes and provide instruction.
