Subject: LEO Options

Hello BEAD team,

Thank you for opening this discussion and opportunity for input.

I have some ideas on how the government can save a lot of money.

There is a small LEO organization that puts their own satellites into orbit and can serve 99% of Earth's hard to reach places. Including Antarctica!

Perhaps you have heard of Elen M€sk? Maybe you have not. He is an amazing guy. He rescued NASA and Boeing! What an amazing sh:t show.

The company in question is similar to the old and quite crappy Dish Network but way way better. Even better than Panasonic or other satellite systems with low latency and high bandwidth.

It is named Space Exploration Technologies Corporation.

You will save us a ton of money if you just stop asking stupid questions. Just use them you ignoramuses.

Thank you.
